

Aesthetics360 Agent Exchange

Strategic report, white-label target map, marketplace comps, partnership structure, and financial model summary

Core thesis: build the KPI-driven AI app store for aesthetic practices - starting with fast standalone utilities, then expanding into integrated revenue, retention, clinical, and analytics agents.

Prepared for	Aesthetics360 leadership and partner discussions
Prepared date	July 10, 2026
Inputs used	Both research chats plus the Aesthetics360 Agent Exchange financial workbook
Use case	Partner alignment, vendor outreach, investor/customer narrative, and marketplace launch planning

Note: The financial outputs are planning-model scenarios, not audited forecasts. Vendor capabilities and HIPAA posture require direct diligence before contracting.

1. Executive Summary

Aesthetics360 should not launch as another medspa CRM, EMR add-on, or generic AI wrapper. The stronger position is an Agent Exchange: a curated marketplace of AI utilities and workflow agents for aesthetic practices, governed by HIPAA-aware infrastructure, vendor review, scoped permissions, and standardized KPI reporting.

Best near-term wedge: launch simple marketing and content utilities first, then use distribution and KPI proof to sell larger integrated agents. The marketplace wins when every app can answer: what did it create, save, recover, convert, or measure?

Recommended launch stack

Layer	What it includes	Why it matters
Standalone traction apps	Before/After Social Studio, Review Response Guard, Promo Builder, GLP-1 Content Kit, Event Promo Kit	Fastest demos, minimal integration drag, easy for Eric/Plastix to sell into existing relationships
KPI-connected growth apps	KPI Storyteller, Lead Response Audit, Quote Follow-up Assistant, Retention/LTV Agent	Creates the measurable ROI narrative that makes the marketplace more than a tool catalog
Flagship agents	Revenue Recovery, Visual Consult/Skin Analysis, Scribe + Consent, Provider Performance Coach, GLP-1 Journey OS	Higher ARPU, stickier accounts, stronger enterprise/MSO use case
Data and distribution layer	CorralData for integrations and normalized metrics; Eric/Plastix/Aesthetix for sales, industry positioning, onboarding, and support	Solves the hardest non-product problem: getting practices to adopt and measure AI

Financial headline

The base case reaches 1,800 active locations by Year 5, equal to 15.0% penetration of a modeled 12,000-location core US medspa/aesthetic practice universe. The model produces \$22.53M of Year 5 ARR, \$18.72M of Year 5 revenue, and \$4.47M of Year 5 EBITDA. The important unit-economic driver is mature net recurring ARPU of roughly \$1,043 per active location per month, built from platform fees, marketplace take-rate revenue, and owned/white-labeled app revenue.

Scenario	Y5 Active Locations	Y5 ARR	Y5 Revenue	Y5 EBITDA	Y5 EBITDA Margin
Conservative	900	\$5.73M	\$4.86M	(\$385.6K)	-7.9%
Base	1,800	\$22.53M	\$18.72M	\$4.47M	23.9%
Upside	3,200	\$64.04M	\$52.83M	\$21.51M	40.7%

2. Market Opportunity and Strategic Thesis

The aesthetic practice market has the right ingredients for a vertical AI marketplace: growth, fragmentation, uneven operational maturity, high marketing spend, and measurable leakage across calls, leads, consults, rebooking, reviews, product sales, and documentation. Prior research cited Baird market commentary that US medspa locations surpassed 10,000 by 2023, while the workbook uses a 12,000-location core US practice universe as the planning assumption [S1]. Grand View Research was used as the global medical spa growth context [S2].

The strategic opportunity is to create the operating and distribution layer for AI tools in aesthetics rather than to build every end-product internally. Practices need simple products that create visible output immediately, but larger groups need measured revenue, retention, clinical, compliance, and multi-location analytics. Aesthetics360 can house both types in one marketplace.

The reason this can work commercially is that the industry already buys fragmented point solutions, but most tools do not prove ROI inside a common KPI system. Aesthetics360 can make vendor selection, installation, HIPAA/subprocessor diligence, and results measurement easier for practices and larger medspa groups.

Strategic implications

- Do not force every marketplace app to be integrated on day one. Standalone products should drive adoption while integrated agents build defensibility.
- Make KPI reporting the marketplace standard. Apps that report standardized outcomes should receive preferred placement.
- Use white-label/API vendors to move quickly, but own the vertical workflow, permissions, marketplace, billing, partner economics, and KPI taxonomy.
- Treat before/after photos, patient communications, and PHI-bearing marketing workflows as sensitive from the beginning, even in lightweight apps.

3. Agent Exchange Blueprint

The Agent Exchange should function like an app store for aesthetic practices, but with healthcare-grade trust and KPI verification. Salesforce AgentExchange, Shopify App Store, HubSpot App Marketplace, Epic Showroom, athenahealth Marketplace, SMART App Gallery, and Aesthetic Record Integration Hub all provide useful patterns. The Aesthetics360 difference should be vertical specialization, KPI-backed listings, and distribution through Eric/Plastix/Aesthetix plus Corral-enabled reporting.

Marketplace operating model

Component	Description	Owner
App catalog	Standalone utilities, light workflows, integrated agents, vendor apps, and internal A360 apps	Aesthetics360
Trust center	BAA status, PHI access level, subprocessors, data retention, call recording/SMS rules, human approval rules	Aesthetics360 with vendor input
KPI layer	Standardized events: lead created, consult booked, treatment completed, invoice paid, photo approved, review posted, quote recovered	Aesthetics360 + CorralData
Distribution/support	Practice outreach, medspa-group relationships, onboarding, implementation playbooks, support	Eric + PlastixMarketing / Aesthetix CRM
Integration layer	Corral connections where available; Aesthetix CRM/API/export paths; standalone upload mode for non-integrated apps	CorralData and Aesthetics360

App listing requirements

Listing field	Purpose
Category and install depth	Signals whether the app is instant, upload-based, CRM-connected, Corral-verified, or clinical/workflow-connected
Required permissions	Clarifies exactly what data/actions the app needs
PHI and marketing posture	Shows whether the app touches PHI and whether it requires patient authorization or BAA coverage
Tracked KPIs	Forces every serious app to report business or operational outcomes
Pricing and rev-share class	Supports clear marketplace billing and partner economics
Case studies and benchmarks	Creates proof for larger group sales and premium placement

Recommended marketplace badges: Standalone, CRM-Connected, Corral KPI-Verified, BAA Available, No PHI Required, Human Approval Required, A360 Reviewed, MSO Ready.

4. Simple Traction Apps

The marketplace needs fast wins that practices can understand immediately. These products may not become the biggest revenue drivers individually, but they create traction, marketplace inventory, demos, and upsell paths into integrated KPI agents.

App / Agent	Integration depth	Price range	White-label/API candidates	Primary KPI
Before/After Social Studio	No integration required; optional photo library	\$49-\$149/mo	Bannerbear, Placid, Creatomate, Cloudinary	Posts generated; approvals; content used
Review Response Guard	No integration required; optional Google Business Profile	\$49-\$99/mo	Grade.us, Vendasta, OpenAI/LLM layer	Review response time; review volume
Ad/Caption Generator for Treatments	No integration required	\$39-\$99/mo	OpenAI/Anthropic + template engine	Campaigns created; approval rate
Provider Bio + Content Refresh	No integration required	\$29-\$79/mo	LLM + Placid/Bannerbear	Pages/posts generated
Event Promo Kit Generator	No integration required	\$49/event or \$99/mo	Bannerbear, Placid, Creatomate	Event registrations; booked consults
Monthly KPI Narrative Generator	Corral if connected; CSV upload if not	\$99-\$199/mo	CorralData, StackAI, LLM	Reports generated; action items completed
Lead Speed-to-Response Audit	CSV import or CRM integration	\$199 one-time / \$99/mo	Aesthetix CRM, CorralData, n8n	Speed-to-lead; booked consults
Quote Follow-up Assistant	CRM/scheduling optional	\$149-\$299/mo	Aesthetix CRM, SMS vendor, LLM	Quote recovery; deposits
GLP-1 Content + Package Builder	No integration required initially	\$149-\$299/mo	LLM + template engine	Packages created; GLP-1 consults
Skin Analysis Lead Magnet	Form + photo upload; CRM optional	\$199-\$499/mo	Haut.AI, Revieve, Perfect Corp, Thea Care, lululab	Scan-to-consult conversion

First product to build: Before/After Social Studio

This is the strongest traction app because the workflow is obvious: practices already have before/after assets, but often fail to transform them into branded, compliant content. The app can take approved photos and generate Instagram carousels, story frames, reel scripts, captions, hashtags, disclaimers, Google Business Profile posts, email blocks, and SMS teasers.

Workflow step	A360 design choice
Upload / select photos	Require consent status, treatment, provider, date range, and marketing authorization before content creation
Generate assets	Use template APIs such as Bannerbear, Placid, Creatomate, and Cloudinary only after vendor/PHI review
Human approval	Nothing publishes automatically until a user approves
Track outcomes	Posts generated, approvals, assets used, engagement, consults attributed when integrated later
Upsell path	Connect to KPI Storyteller, social analytics, reputation agent, visual consult, and campaign builder

5. Flagship KPI Agents

The flagship agents justify higher pricing and enterprise conversations. They should be rolled out after simple apps prove marketplace adoption, unless a partner already has a strong white-label implementation path.

Agent	Integration depth	Price range	White-label/API candidates	Core KPI
AI Front Desk / Missed Call Recovery	Phone/SMS/scheduling/CRM	\$499-\$1,500/mo	Hyro, Assort, Retell, Telnyx	Recovered missed calls; consults booked
Consult Scribe + Consent Checklist	Audio + EMR/photo/consent optional	\$199-\$599/provider /mo	Nabla, Heidi, Suki	Documentation minutes saved; consent defects
Retention / LTV Agent	Corral/CRM/EMR preferred	\$399-\$999/location/ mo	CorralData, Aesthetix CRM, StackAI	Rebooking; LTV; churn

Additional high-value agent concepts from the first research chat

Concept	Aesthetics360 angle	KPI anchor
GLP-1 Aesthetic Journey OS	Own the care-pathway logic for post-weight-loss skin laxity, facial volume, body contouring, packages, and subscriptions	GLP-1 package conversion, sequence completion, LTV
Provider Performance Coach	Gong-style call and consult analysis for front desk and provider sales coaching	Call-to-consult conversion, consult close rate, objection handling
Outcomes Registry	Before/after intelligence tied to treatment, provider, lot/device data, satisfaction, and retreatment	Photo completion, satisfaction, adverse events, provider variation
Inventory/Margin Agent	Procedure-level profitability, injectable usage, waste, expiring inventory, discount leakage	Gross margin per treatment, waste, provider profitability
Compliance/Medical Director Oversight	Protocols, chart audits, consent defects, training attestations, incident logs	Audit completion, consent defects, training compliance
Commerce Media / Manufacturer Network	Sponsored provider education, templates, training, and de-identified trend insights	Campaign adoption, utilization lift, opt-in engagement

6. White-Label and API Vendor Target Map

The goal is not to resell generic AI. The goal is to repackage vendor capabilities into aesthetic-practice workflows with A360 trust, Aesthetix/Plastix distribution, and Corral-supported KPI measurement where applicable.

Category	Vendor targets	Potential A360 product fit
Creative automation	Bannerbear, Placid, Creatomate, Cloudinary	Before/After Social Studio, event kits, provider spotlights, campaign graphics, reels
Skin analysis / visual consult	Haut.AI, Revieve, Thea Care, Perfect Corp / YouCam, lululab, ChoiceTech / ChoiceDx	Visual consult, skin score tracking, patient lead magnets, skincare/product recommendations, in-practice kiosk demos
Voice / patient access	Hyro, Assort Health, Retell AI, Telnyx	AI front desk, missed call recovery, intake, scheduling, reminders, call overflow
Ambient documentation	Nabla Connect, Heidi Health, Suki	Aesthetic consult scribe, consent checklist, treatment-plan documentation
Reviews / agency marketplace	Grade.us, Vendasta	Reputation agent, review response guard, white-label local business app economics
AI builders / workflow automation	StackAI, Voiceflow, n8n	Rapid prototypes, internal automations, standalone agent apps, non-Corral workflow glue

Due diligence filter for every vendor

- Will the vendor sign a BAA or operate without PHI? If not, constrain the app to non-PHI or human-uploaded non-identifiable assets.
- Can the vendor be embedded, white-labeled, or sold through OEM/API terms rather than forcing customers into a separate branded product?
- Can the vendor emit usage and KPI events back to Aesthetics360 and/or Corral?
- What data is stored, for how long, in what region, and with which subprocessors?
- What are the claim boundaries, especially for skin analysis and anything that could be interpreted as medical diagnosis?

Detailed vendor target table

Category	Company	Region	A360 angle	Key diligence question
Creative automation	Bannerbear	Singapore / global	Power Before/After Social Studio, event kits, staff spotlights	BAA? PHI retention? white-label/API terms?
Creative automation	Placid	Austria / EU	HIPAA-contained front end with external rendering only if images are authorized/non-PHI	BAA? EU data residency? PHI policy?
Creative automation	Creatomate	Netherlands / EU	Before/after reels, promo videos, provider clips	BAA? storage/deletion? commercial OEM terms?
Image/media AI	Cloudinary	US/global	Background removal, smart crop, branded image transformation	HIPAA eligibility/BAA package? subprocessor list?
Skin analysis	Haut.AI	Estonia / Europe + US presence	Visual Consult, skin score tracking, product recommendation	Medical vs cosmetic claims; BAA; API/OEM; US data residency
Skin analysis	Reveve	Helsinki + Chicago	Premium white-label skin advisor and beauty discovery	Cost, white-label rights, BAA, medspa exclusivity
Skin/nail analysis	Thea Care	Berlin / EU	EU emerging partner for skin/nail lead magnet	Clinical validation, US rollout interest, HIPAA posture
Skin analysis	Perfect Corp / YouCam API	Taiwan/US/global	Fastest API-style skin analysis integration	BAA terms, per-scan economics, claim boundaries
K-beauty skin analysis	lululab	South Korea	Differentiate with K-beauty/K-clinic style visual consult	API/OEM availability, US rights, data processing
Retail diagnostic kiosk	ChoiceTech Korea / ChoiceDx	South Korea	In-practice kiosk/event scanner; high-demo value	Hardware lead time, US certification, OEM economics
Healthcare voice AI	Hyro	US	Enterprise patient access agent for larger groups	White-label? medspa specialty? integration cost?
Healthcare voice AI	Assort Health	US	Premium AI front desk for enterprise groups	Specialty customization for medspa; rev share?
Voice infrastructure	Retell AI	US/global	Mid-market AI phone agent under A360 workflows	BAA, call recording, EHR/scheduler connectors
Voice/SMS infrastructure	Telnyx	US/global	Build/own AI front desk while buying voice rails	BAA, carrier costs, SMS compliance, agent control
Ambient scribe	Nabla Connect	France/US	Aesthetic Consult Scribe with specialty templates	OEM terms, specialty templates, BAA, audio retention
Ambient scribe	Heidi Health	Australia/global	Lower-friction scribe backend for aesthetics	HIPAA/BAA, US hosting, partner terms
Ambient scribe	Suki	US	Enterprise scribe route for large groups	API pricing, medspa fit, implementation timeline
White-label reviews	Grade.us	US	Reputation Agent and review guardrails	Healthcare/PHI support, review gating prevention
Agency marketplace	Vendasta	Canada/global	Model reference and possible quick resale stack	HIPAA limitations; direct competitor risk; vertical fit
AI builder	StackAI	US/global	Rapid internal/standalone agents without full custom build	BAA, isolated deployments, vendor lock-in
Conversational AI builder	Voiceflow	Canada/global	Prototype patient concierge/FAQ agents	HIPAA posture; white-label; PHI limitations
Workflow automation	n8n	Germany/global	Internal integration glue for non-Corral accounts	Must self-host securely; BAA infrastructure; audit logs

7. Marketplace Comparable Models

The Agent Exchange can borrow different design patterns from healthcare and non-healthcare marketplaces. The most important lesson is to combine easy discovery with a real trust layer and a measurable outcome layer.

Marketplace	Sector	What to copy	What to avoid
Salesforce AgentExchange / AppExchange	Enterprise SaaS / AI agents	Trusted marketplace, security review, install from inside workflow, partner ecosystem	Too heavy a certification process early; avoid long onboarding for micro-apps
Shopify App Store	Commerce	Simple app categories, merchant reviews, billing, targeted recommendations	Undifferentiated app sprawl
HubSpot App Marketplace	CRM/marketing	Workflow integrations, sales/marketing categories, OAuth permissions	Letting app count grow without vertical KPI story
Epic Showroom / Vendor Services	Healthcare	Developer access, sandboxes, technical support, marketplace discovery	Do not imply certification/endorsement unless review process is real
athenahealth Marketplace	Healthcare practice software	Curated partner marketplace and practice add-ons	Overly broad generic healthcare categories
SMART App Gallery	Healthcare interoperability	Open directory around SMART/FHIR-compatible apps	Too technical for practice-owner buyers

Marketplace	Sector	What to copy	What to avoid
Oracle Health Developer Program	Healthcare EHR ecosystem	Developer resources, validated apps, customer workflow extension	Long enterprise sales cycle
NextGen Marketplace	Ambulatory healthcare	API-connected third-party vendor marketplace	Limited visibility for non-integrated apps
Aesthetic Record Integration Hub	Aesthetic practice software	Vertical-specific integrations; owner-friendly categories	It is an integration hub, not a KPI-agent exchange
Vendasta Marketplace	Agency/local business SaaS	White-label/reseller economics and one bill/one login packaging	Generic SMB products may not satisfy healthcare compliance
Workday Marketplace / Agent System of Record	Enterprise HR/finance	Agent measurement/governance language	Enterprise complexity not needed at first

Implications for Aesthetics360

- Copy Salesforce AgentExchange language around trusted agents, installable business capabilities, and partner ecosystem, but keep early onboarding lighter.
- Copy Shopify and HubSpot on simple categories, clear pricing, ratings, billing, and workflow tags.
- Copy Epic/athenahealth/SMART on developer review, technical standards, and interoperability discipline, but avoid healthcare-enterprise heaviness for micro-apps.
- Use Aesthetic Record as the vertical proof that aesthetic practices accept integration hubs, then differentiate with KPI-verified agents rather than a pure integration directory.

8. Three-Way Partnership Structure

The proposed partnership should align around three distinct advantages: Aesthetics360 owns the enterprise platform and Agent Exchange, Eric/PlastixMarketing/Aesthetix owns distribution and practice enablement, and CorralData owns the integration and KPI data layer where connected.

Partner	Core role	What they own	Suggested economics
You / Aesthetics360	Agent Exchange operator	Enterprise HIPAA platform, marketplace, app packaging, permissions, vendor contracts, trust center, billing, KPI taxonomy	40%-60% of net revenue after vendor pass-through; higher on owned apps
Eric + PlastixMarketing / Aesthetix CRM	Industry distribution and enablement	Medspa expertise, larger group relationships, sales motion, campaign/service playbooks, onboarding/support layer	20%-35% of recurring net revenue on sourced/supported accounts plus 35%-60% of onboarding/services fees
CorralData	Data integration and KPI layer	Connectors, data normalization, dashboards, metric definitions, AI data chat/reporting for connected practices	8%-15% of recurring net revenue for Corral-connected accounts or a fixed data-layer wholesale fee
Third-party app vendor	Underlying technology	API/OEM/white-label tech such as skin analysis, voice, scribe, creative automation	Wholesale API fee or 20%-50% of retail app price, depending on category

Commercial routing model

Customer / app situation	When to use	Commercial rule	Technical rule
Corral-connected customer	Practice already uses Corral or agrees to add it	Corral rev share applies	Agents read/write KPI events through normalized data layer
Aesthetix CRM-only customer	Customer is on Aesthetix but not Corral	Eric/Aesthetix rev share applies; offer Corral upgrade	Use Aesthetix CRM APIs/exports/automation first; add Corral when KPI depth required
Standalone/no integration	Micro-apps, one-off utilities, content generators	No Corral share unless Corral participates	CSV upload, manual upload, portal-only workflow; fastest launch path
Other EMR/CRM customer	Large group uses another system	Integration fee or higher monthly tier	Use Corral if supported; otherwise build targeted connector or operate standalone

Example revenue waterfall for a \$499/month app

Line item	Amount	% of retail	Notes
Retail price to practice	\$499	100.0%	What customer sees
Less: vendor/API wholesale	(\$150)	-30.1%	Could be per-scan, per-minute, or fixed license
Net distributable revenue	\$349	69.9%	Split among A360 / Eric-Plastix / Corral if applicable
Aesthetics360 share	\$157	31.5%	Marketplace/platform/operator
Eric / Plastix / Aesthetix share	\$105	21.0%	Sales, support, industry packaging
CorralData share	\$52	10.5%	Only where Corral is used for integration/KPI layer
Integration/ops reserve	\$35	7.0%	Support, billing, integration maintenance

The rev-share should vary by app type. Standalone micro-apps should not automatically allocate a Corral share if Corral is not used. Corral-connected KPI apps should compensate Corral through either a rev share or a fixed wholesale data-layer fee. Enterprise accounts should use custom splits based on who sourced the customer, who supports it, and how much integration work is required.

9. Integration and Data Architecture

Not every app needs integration. This is a strategic advantage because the marketplace can launch quickly with standalone tools while deeper Corral-connected agents are built in parallel.

Level	App type	Examples	Data required
0 - Standalone	No integration	Caption generator, promo builder, provider bio refresh	None
1 - User upload	Upload-based utility	Before/after content studio, call transcript audit, KPI CSV summary	User uploads files, photos, transcripts, or CSVs
2 - CRM-connected	Marketing workflow	Lead nurture, quote follow-up, SMS/email campaigns	Aesthetix CRM or other CRM APIs/exports
3 - Corral KPI-verified	Analytics / revenue agent	KPI Storyteller, retention analytics, attribution, multi-location dashboards	Corral normalization, event model, and metric definitions
4 - Clinical / workflow connected	Higher-sensitivity workflow	Scribe, consent intelligence, medical director review, scheduling/EMR actions	EMR/scheduling/clinical data, BAA coverage, audit logs

Corral should be the KPI verification layer, not a launch bottleneck

For Corral-connected practices, agents can read and write KPI events through the normalized data layer. For Aesthetix CRM-only customers, Aesthetics360 can start with CRM APIs, exports, or automations, then offer a Corral upgrade when deeper attribution is needed. For standalone apps, CSV/manual upload and portal-only workflows are enough to launch.

10. Financial Model and Unit Economics

The financial model combines platform subscription fees, third-party marketplace take-rate revenue, owned/white-labeled app revenue, and onboarding fees. The model is sensitive to location count, app attach rate, take rate, and owned app ARPU. The base case becomes EBITDA-positive in Year 4 and reaches \$4.47M of EBITDA in Year 5.

Scenario	Y5 Active Locations	Y5 ARR	Y5 Revenue	Y5 EBITDA	Y5 EBITDA Margin
Conservative	900	\$5.73M	\$4.86M	(\$385.6K)	-7.9%
Base	1,800	\$22.53M	\$18.72M	\$4.47M	23.9%
Upside	3,200	\$64.04M	\$52.83M	\$21.51M	40.7%

Figure 1. Year 5 scenario comparison extracted from the workbook dashboard.

Base case yearly outputs

Metric	Year 1	Year 2	Year 3	Year 4	Year 5
Active Locations	60	200	500	1,000	1,800
ARR	\$525.4K	\$1.93M	\$5.34M	\$11.60M	\$22.53M
Revenue	\$352.7K	\$1.47M	\$4.19M	\$9.45M	\$18.72M
EBITDA	(\$850.3K)	(\$769.3K)	(\$202.8K)	\$1.29M	\$4.47M

Figure 2. Base case ARR, revenue, and EBITDA across five years.

Unit economics and TAM sensitivity

Metric	Conservative	Base	Upside
Platform MRR / location	\$299	\$499	\$699
Avg third-party app retail price	\$149	\$249	\$299
Avg paid app attach count at maturity	2.2	2.8	3.5
Marketplace take rate	25.0%	35.0%	40.0%
Owned app ARPU at maturity	\$150	\$300	\$550
Monthly net ARPU at maturity	\$531	\$1.0K	\$1.7K
Annual net ARPU at maturity	\$6.4K	\$12.5K	\$20.0K
Core US medspa location universe	12,000	12,000	12,000
Recurring ARR TAM at maturity ARPU	\$76.46M	\$150.19M	\$240.13M
EBITDA break-even active locations (rough)	650	850	350

Financial interpretation

- The base case does not require market domination. It assumes 1,800 active locations by Year 5, or 15.0% penetration of the modeled 12,000-location core universe.
- Mature monthly net ARPU is the key metric: \$530.95 conservative, \$1,043.02 base, and \$1,667.60 upside.
- The model works because the platform fee is only one component. Attach rate across simple apps, flagship agents, and owned/white-label products compounds ARPU.
- Corral-connected agents improve defensibility and enterprise value because they allow Aesthetics360 to prove revenue, retention, and operational lift rather than only selling content generation.

11. Packaging, GTM, and 90-Day Plan

Package	Target customer	Included app types	Suggested price logic
Starter Marketplace	Single-location and smaller practices that want immediate AI utility	Before/After Social Studio, Caption Generator, Review Response Guard, Promo Builder, Event-in-a-Box	\$199-\$399/month
GrowthOS	Practices that want revenue lift and marketing accountability	Lead response, Quote Follow-up, GLP-1 package builder, Visual Consult, KPI Storyteller	\$699-\$1,499/month
Enterprise Agent Exchange	MSOs, larger medspa groups, plastic surgery groups, and multi-location operators	Revenue Recovery, Provider Coach, Scribe + Consent, Retention/LTV, Corral KPI dashboard, marketplace access	\$2,500-\$10,000+/month depending on scope

90-day launch plan

Phase	Deliverables
Days 1-30: foundation	Finalize app categories, install levels, trust badges, vendor review checklist, BAA/subprocessor framework, app card template, rev-share rules, and partner MOU. Start vendor outreach.
Days 31-60: pilot simple apps	Pilot 10-20 practices through Eric/Plastix/Aesthetix. Launch Before/After Social Studio, Review Guard, Promo Builder, GLP-1 Content Kit, and CSV/Corral KPI Storyteller.
Days 61-90: prove ROI	Collect case studies, onboard first Corral-connected accounts, pilot Revenue Recovery and Visual Consult, build marketplace demo, and package enterprise offer for larger medspa groups.

12. Risk, Compliance, and Due Diligence

The compliance wrapper should be treated as a competitive advantage. The marketplace should distinguish between apps that touch PHI, apps that can operate without PHI, and apps that require patient authorization for marketing use. This is especially important for before/after photos, review responses, lead reactivation, sponsored campaigns, and patient-specific content.

Risk area	Why it matters	Control
HIPAA marketing	HHS guidance was used as a source for PHI-based marketing guardrails [S8]	Require authorization where needed; avoid PHI-based targeting unless reviewed; track consent and vendor access.

Risk area	Why it matters	Control
Reviews/testimonials	FTC review/testimonial guidance was used as a source for reputation-app guardrails [S9] .	No fake reviews, review gating, undisclosed incentives, or misleading testimonial workflows.
Skin analysis claims	Cosmetic analysis is different from diagnosis or triage.	Constrain claims, review FDA/medical-device implications, and disclose limitations.
AI voice/SMS/calls	AI agents require call recording consent, SMS consent, opt-outs, and escalation rules.	Human-in-the-loop escalation, audit logs, call/SMS compliance review.
Vendor/subprocessor risk	White-label vendors may store or process sensitive data.	BAA where needed, subprocessors, retention/deletion controls, data-region review, security questionnaire.
Revenue share/legal risk	Healthcare referral and manufacturer compensation models can create risk.	Legal review before revenue share tied to clinical referrals, treatment selection, or PHI-based manufacturer targeting.

13. Recommended Next Decisions

Decision sequence: validate partnership economics, launch five simple apps, select two flagship white-label pilots, and make Corral KPI verification the premium tier rather than the prerequisite for every app.

Decision	Recommendation
First apps	Before/After Social Studio, Review Response Guard, Promo Builder, GLP-1 Content Kit, KPI Storyteller
First flagship pilots	Revenue Recovery Agent and Visual Consult/Skin Analysis Agent
Vendor outreach priority	Creative automation first, skin analysis second, healthcare voice third, scribe fourth
Partner economics	Use different splits for standalone apps, Corral-connected apps, third-party marketplace apps, and enterprise accounts
KPI standard	Create event schema before launch so even simple apps can graduate into KPI-connected products
Distribution	Use Eric/Plastix/Aesthetix to identify pilot practices and larger groups; package case studies rapidly

The most compelling narrative to the market is simple: Aesthetics360 is the place where aesthetic practices install AI agents that are reviewed, relevant, and measurable.

Appendix A. Core Workbook Data Included in This Report

The following tables are extracted or summarized from the workbook: Dashboard, Financial Model, Unit Economics, App Catalog, White Label Targets, Marketplace Comps, and Partnership Structure.

A1. Scenario summary

Scenario	Y5 Active Locations	Y5 ARR	Y5 Revenue	Y5 EBITDA	Y5 EBITDA Margin
Conservative	900	\$5.73M	\$4.86M	(\$385.6K)	-7.9%
Base	1,800	\$22.53M	\$18.72M	\$4.47M	23.9%
Upside	3,200	\$64.04M	\$52.83M	\$21.51M	40.7%

A2. Base case yearly outputs

Metric	Year 1	Year 2	Year 3	Year 4	Year 5
Active Locations	60	200	500	1,000	1,800
ARR	\$525.4K	\$1.93M	\$5.34M	\$11.60M	\$22.53M
Revenue	\$352.7K	\$1.47M	\$4.19M	\$9.45M	\$18.72M
EBITDA	(\$850.3K)	(\$769.3K)	(\$202.8K)	\$1.29M	\$4.47M

A3. Unit economics

Metric	Conservative	Base	Upside
Platform MRR / location	\$299	\$499	\$699
Avg third-party app retail price	\$149	\$249	\$299
Avg paid app attach count at maturity	2.2	2.8	3.5
Marketplace take rate	25.0%	35.0%	40.0%
Owned app ARPU at maturity	\$150	\$300	\$550
Monthly net ARPU at maturity	\$531	\$1.0K	\$1.7K
Annual net ARPU at maturity	\$6.4K	\$12.5K	\$20.0K
Core US medspa location universe	12,000	12,000	12,000
Recurring ARR TAM at maturity ARPU	\$76.46M	\$150.19M	\$240.13M
EBITDA break-even active locations (rough)	650	850	350
